

Active Shooter

Pearls:

- Level 1 trauma centers can manage up to 5 penetrating trauma patients per hour
- If more than 5 penetrating trauma patients, consider multiple trauma centers
- The active shooter sack is the only equipment initially required.
- If a casualty collection point is established and additional equipment is required, a cache of needed supplies should be requested.
- Make notification to trauma centers as soon as possible with the projected number of patients.
- Please refer to the MCI protocol for proper radio communication and channel assignments. Task cards and job vests should be utilized by all personnel involved in an MPI
- If blast injury with more than 5 patients, patients with SBP <90 and/or obvious external trauma to 4 or more body surface areas should go to the Level I trauma center. Others may be considered for community hospital transport.
- Multiple patients may be transported in the same EMS unit if needed. When possible, patients of similar acuity should be transported in the same unit to assist with appropriate transport destination.

Active Shooter Sack (A.S.S. Bag)

Part Description	Cabinet PAR	Expiration Date	Last Inspection Date
